## **Homework 2**

### **CS314**

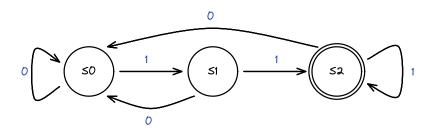

# 1 Problem — Finite State Automaton (FSA) - 20 pts

1. Specify the state transition graph of (1) a NFA (which is not DFA as well) without  $\epsilon$  transitions and (2) a DFA that recognizes the following language: "All strings of 0's and 1's that end with 11

NFA

**DFA** 

2. In addition to the state transition graphs (diagram), give the state transition table and the formal specification of an automaton as the quadruple < S, s, F, T> for both, your NFA and DFA. Do not include "error" states.

S	s	F
S0	0	S0
S0	1	S1
S0	1	S1
S1	1	S2

#### **NFA**

State transition table

	0	1
S0	S0	S1, S2
S1	-	S2
S2	-	-

Quadruple <S, s, F T> where...

- *S* is the set of states **(S0, S1, S2)**
- s is the start state **S0**
- F is the final state **S2**
- T is the set of labeled transitions
  - $(S0, 0) \rightarrow S0$
  - $(S0, 1) \to S0$
  - $(S0, 1) \rightarrow S1$
  - (S1, 1) → S2

#### **DFA**

State transition table

	0	1
S0	S0	S1

	0	1
S1	S0	S2
S2	S0	S2

Quadruple <S, s, F T> where...

- *S* is the set of states **(S0, S1, S2)**
- s is the start state S0
- F is the final state S2
- T is the set of labeled transitions
  - $(S0, 0) \rightarrow S0$
  - $(S0, 1) \rightarrow S1$
  - $(S1, 0) \rightarrow S0$
  - (S1, 1) → S2
  - $(S2, 0) \rightarrow S0$
  - (S2, 1) → S2

# 2 Problem — Regular and Context-Free Languages - 20 pts

Are the following languages context-free or not? If yes, specify a context-free grammar in BNF notation that generates the language. If not, give an informal argument. Furthermore, which of the languages are also regular languages, i.e., can be expressed by a regular expression? Prove it by giving the regular expression that specifies the language.

1. 
$$\{a^nb^mc^o\mid m>0, n\geq 0, o>0\}$$
, with alphabet  $\Sigma=\{a,b,c\}$ 

This **is a context-free language**.

$$\langle B \rangle ::= b \langle B \rangle \mid \epsilon$$

$$<$$
C $>$  ::= c $<$ C $> |  $\epsilon$$ 

It can be expressed with the regular expression,  $a^*b^+c^+$ .

2. 
$$\{a^nb^nc^n\mid n>0\}$$
, with alphabet  $\Sigma=\{a,b,c\}$ 

This **is not a context-free language**.  $a^nb^n$  and  $b^nc^n$  can be expressed using context-free languages. However, when considering  $a^nb^nc^n$ , context is necessary to determine how many occurrences of c are required.

Furthermore, it can not be expressed with a regular expression.

3. 
$$\{0^{2n}1^{4n}\mid n>0\}$$
, with alphabet  $\Sigma=\{0,1\}$ 

This is a context-free language, but can not be expressed by regular expression.

 ::= 001111 | 
$$\epsilon$$

4. 
$$\{wcw^R \mid w \in \Sigma^* \text{ and } w^R \text{ is w in reverse } \}$$
, with alphabet  $\Sigma = \{a,b,c\}$ 

This is a context-free language, but can not be expressed by regular expression.

5. 
$$\{a^nb^mc^md^n\mid n\geq 0, m\geq 0\}$$
, with alphabet  $\Sigma=\{a,b,c,d\}$ 

This is a context-free language, but can not be expressed as a regular expression.

```
<start> ::= <AD>
<AD> ::= a<AD>d | b<BC>c | \epsilon
<BC> ::= b <BC> c | \epsilon
```

6. 
$$\{a^nb^mc^nd^m\mid n\geq 0, m\geq 0\}$$
, with alphabet  $\Sigma=\{a,b,c,d\}$ 

This **is not a context-free language**. Individually, the pairs  $a^nb^m$  and  $c^nd^m$  can be defined using context-free languages but together, the number of repetitions n and m can not be generated without context from the other pair. Context is required to determine how many occurrences of a, which is necessary to determine how many occurrences of c are required. The same goes for b and d.

Furthemore, it can not be expressed with a regular expression.

7. 
$$\{a^na^nb^nb^n\mid n\geq 0\}$$
, with alphabet  $\Sigma=\{a,b\}$   
Note that  $a^na^nb^nb^n=a^{2n}b^{2n}$ 

This is a context-free language, but can not be expressed as a regular expression.

```
<start> ::= aa<start>bb | \epsilon
```

8.  $\{w \mid w \text{ has more than 3 symbols}\}$ , with alphabet  $\Sigma = \{a,b\}$ 

#### This is a context-free language.

```
<start> ::= <AB><AB><AB><repeat>
<AB> ::= A | B
<repeat> ::= <AB><repeat> | ε
```

It can expressed with the regular expression,  $(a|b)(a|b)(a|b)(a|b)^+$ 

# 3 Problem — Derivation, Parse Tree, Ambiguity, Precedence & Associativity - 60 pts

A language that is a subset of the language of propositional logic may defined as follows:

$$< ext{start} > ::= < expr > < expr > ::= < expr >  $\lor < expr >$   $< expr > \land < expr > < expr >  $\land < expr >$   $< expr > \leftrightarrow < expr > < const > | < var > < const > ::= true | false < var > ::= a | b | c$$$$

1. Give a leftmost and a rightmost derivation for the sentence

$$a \wedge true \wedge b \leftrightarrow false \vee true$$

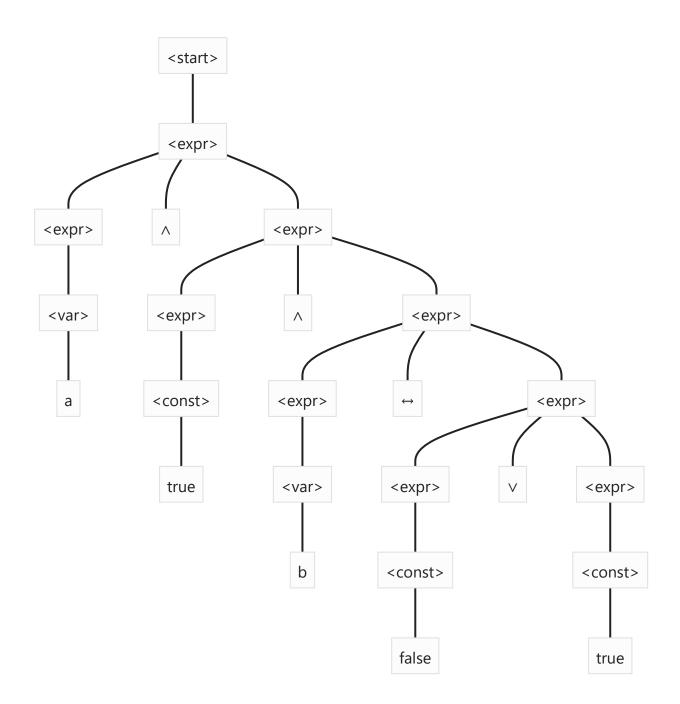

Leftmost	Rule applied
<expr></expr>	1
<expr> ∧ <expr></expr></expr>	2b
<var> ∧ <expr></expr></var>	2e
a ∧ <expr></expr>	4a
$a \land < expr > \land < expr >$	2b
$a \land < const > \land < expr >$	2d
$a \wedge true \wedge \langle expr \rangle$	3a
$a \land true \land \langle expr \rangle \leftrightarrow \langle expr \rangle$	2c
$a \land true \land < var > \leftrightarrow < expr >$	2e
$a \wedge true \wedge b \leftrightarrow \langle expr \rangle$	4b
$a \land true \land b \leftrightarrow \langle expr \rangle \lor \langle expr \rangle$	2a

Leftmost	Rule applied
$a \land true \land b \leftrightarrow <\!const\!> \lor <\!expr\!>$	2d
$a \wedge true \wedge b \leftrightarrow false \vee <\!expr>\!$	3b
$a \wedge true \wedge b \leftrightarrow false \vee $	2d
$a \wedge true \wedge b \leftrightarrow false \vee true$	4a

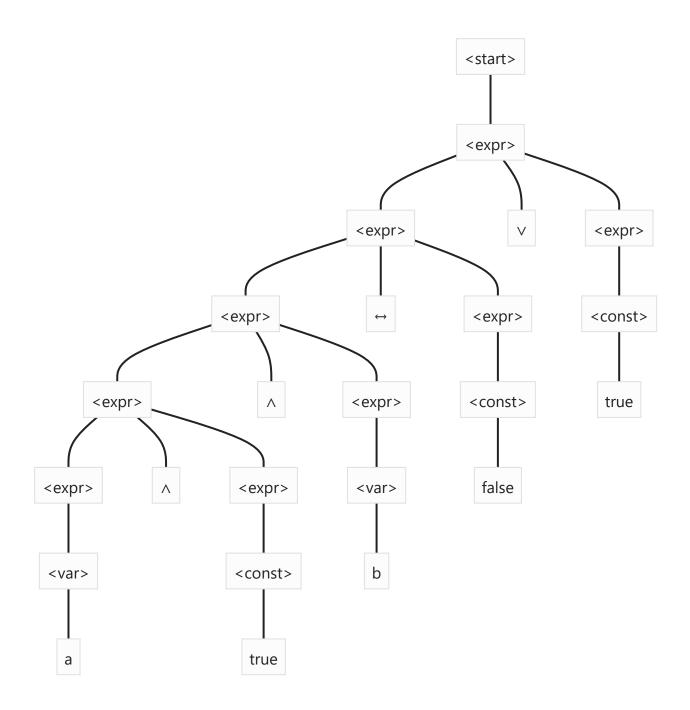

Rightmost	Rule applied
<expr></expr>	1
<expr> ∨ <expr></expr></expr>	2a
<expr> ∨ <const></const></expr>	2d
<expr> ∨ true</expr>	3a
$\langle expr \rangle \leftrightarrow \langle expr \rangle \lor true$	2c
$\langle expr \rangle \leftrightarrow \langle const \rangle \lor true$	2d
$\langle expr \rangle \leftrightarrow false \lor true$	3b
$\langle expr \rangle \land \langle expr \rangle \leftrightarrow false \lor true$	2b
$\langle expr \rangle \land \langle var \rangle \leftrightarrow false \lor true$	2e
$\langle expr \rangle \land b \leftrightarrow false \lor true$	4b
$<$ expr $> \land <$ expr $> \land b \leftrightarrow $ false $\lor $ true	2b
$\langle expr \rangle \land \langle const \rangle \land b \leftrightarrow false \lor true$	2d
$\langle expr \rangle \wedge true \wedge b \leftrightarrow false \vee true$	3a
$<$ var $> \land$ true $\land$ b $\leftrightarrow$ false $\lor$ true	2e
$a \wedge true \wedge b \leftrightarrow false \vee true$	5a

2. Give the corresponding parse trees for the derivations.

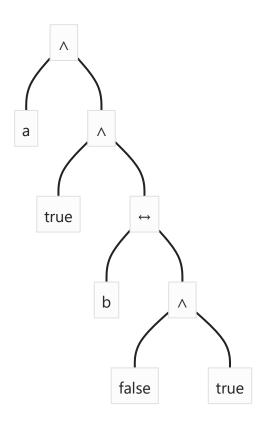

## Leftmost

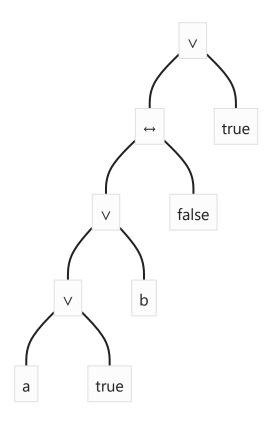

Rightmost

3. Give the corresponding abstract syntax tree (AST) **Leftmost** 

## Rightmost

4. Show that the above grammar is ambiguous. Take the sentence, a  $\wedge \ {\bf true} \ \wedge \ b$  , for example.

With the above grammar, we may generate two distinct derivations for this sentence (either two leftmost, or two rightmost), which shows that the grammar is ambiguous.

#### Derivation 1.

Leftmost	Rule applied
<expr></expr>	1
<expr> ∧ <expr></expr></expr>	2b
<var> ∧ <expr></expr></var>	2e
a ∧ <expr></expr>	4a
$a \land < expr > \land < expr >$	2b
$a \land < const > \land < expr >$	2d
$a \wedge true \wedge \langle expr \rangle$	3a
$a \wedge true \wedge < var>$	2e
$a \wedge true \wedge b$	4b

#### Derivation 2.

Leftmost	Rule applied
<expr></expr>	1
<expr> ∧ <expr></expr></expr>	2b
$<$ expr $> \land <$ expr $> \land <$ expr $>$	2c
$<$ var $> \land <$ expr $> \land <$ expr $>$	2e
$a \land < expr > \land < expr >$	5a
$a \land < const > \land < expr >$	2d
$a \wedge true \wedge \langle expr \rangle$	3a
a ∧ true ∧ <var></var>	2e
$a \wedge true \wedge b$	4b

5. Give an unambiguous grammar for the same language that enforces the following precendence and associativity:

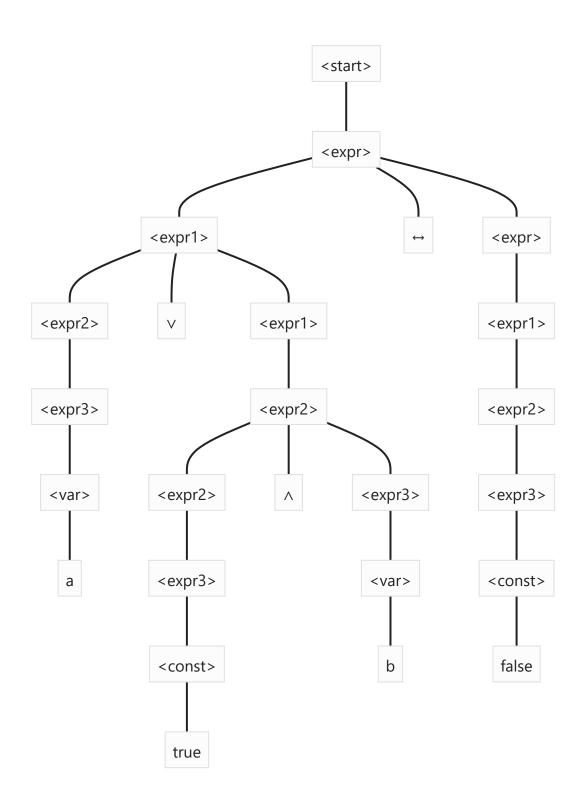

- $\wedge$  has the highest precedence (binds strongest), followed by a  $\vee$ , and then  $\leftrightarrow$
- $\vee$  is left associative, and  $\leftrightarrow$  and  $\vee$  are right associative

```
< start > ::= < expr > 
 < expr > ::= < expr1 > \leftrightarrow < expr > | < expr1 > 
 < expr1 > ::= < expr2 > \lor < expr1 > | < expr2 > 
 < expr2 > ::= < expr2 > \land < expr3 > | < expr3 > 
 < expr3 > ::= < const > | < var > 
 < const > ::= true | false 
 < var > ::= a | b | c
```

6. Give the parse tree and AST for your new, unambiguous grammar for the sentence

$$a \vee true \wedge b \leftrightarrow false$$

Parse tree

AST
